Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

- 1–3. (Cancelled)
- 4. (Currently Amended) A print assembly for pagewidth inkjet printing, the print assembly comprising

an elongate carrier that is mountable on a support structure of a printer in an operative position with respect to a platen of the printer;

a number of printhead chips positioned on the carrier, the printhead chips each having a plurality of ink ejection nozzle arrangements on a wafer substrate, each nozzle arrangement having an actuator for ejecting ink from an associated nozzle when a resistive element of said actuator is heated by an electrical current supplied by drive circuitry on the wafer substrate; and

at least one controller <u>mounted on a printed circuit board</u> that is also-positioned on the carrier-and that is, the controller being connected to a plurality of the printhead chips via a flexible printed circuit board and being configured to control operation of at least 10,000 nozzle arrangements of the <u>connected</u> printhead chips.

5-6. (Cancelled)

- 7. (Previously Presented) A print assembly as claimed in claim 4, in which the printhead chips together incorporate at least one hundred thousand nozzle arrangements.
- 8. (Previously Presented) A print assembly as claimed in claim 4, in which the printhead chips together incorporate at least two hundred thousand nozzle arrangements.
- 9. (Original) A print assembly as claimed in claim 8, which includes between forty and one hundred printhead chips positioned on the carrier.
- 10. (Original) A print assembly as claimed in claim 4, in which each printhead chip is the product of an integrated circuit fabrication process.

Appln No. 10/510151

Amdt. Dated: September 17, 2009

Response to Office Action of June 16, 2009

3

11. (Previously Presented) A print assembly as claimed in claim 10, in which and the

drive circuitry is comprised in a CMOS drive circuitry layer positioned on the wafer

substrate with the nozzle arrangements positioned on the wafer substrate and the CMOS

drive circuitry layer.

12. (Previously Presented) A print assembly as claimed in claim 11, in which each

nozzle arrangement is electrically connected to the CMOS drive circuitry layer.

13. (Original) A print assembly as claimed in claim 12, which includes a plurality of

printhead modules, each printhead module incorporating a printhead chip, the printhead

modules being mounted on the carrier.

14-20. (Cancelled)
